

Welcome to GoSniff: Quick Set Up Guide

You're in! We're so glad you and your pup joined the pack.

What is GoSniff?

GoSniff is a real-time social map (Waze plus Grindr, but for dogs) where you see which dogs are at the park right now, check in when you're out, message your dog friends, and get alerts about lost dogs, coyotes, or other stuff worth knowing about. It's the easiest way to make dog playdates happen and find walking buddies when you want them.

GoSniff is web app, not a downloaded app

GoSniff isn't in the App Store (yet). You access it through your phone's browser, but you can add it to your home screen so it looks and feels exactly like a regular app.

iPhone:

1. Open Safari (must be Safari, not Chrome or another browser).
2. Go to gosniff.app (delete the old gosniff.vercel.app from your home screen if you have it).
3. Tap the Share button  at the bottom.
4. Tap "Add to Home Screen" .
5. Make sure "Open as Web App" is checked.
6. Tap "Add."

Android:

7. Open Chrome.
8. Go to gosniff.app (delete the old gosniff.vercel.app from your home screen if you have it).
9. Tap the three dots (menu) in the top right.
10. Tap "Add to Home Screen."
11. Tap "Add."

You need to allow two permissions

Location:

GoSniff is a map, so it needs to know where you are so you can check in at parks and see which dogs are nearby. When GoSniff asks "Allow location access?"—tap Allow. You control your check-in visibility each time you check in (you can set it to public or friends-only).

Notifications:

Notifications let your dog friends tell you when they're at the park. Without notifications, you have to remember to open the app to find out. With them, you get a ping when your pack checks in. Tap Allow when GoSniff asks.

Privacy—your human identity is never revealed

Your human account is completely private. Other people see your dog's name, photo, breed, and energy level but they never see your email, phone number, or your name. Only the dogs you explicitly invite to your pack can message your dog.

Your check-in location is only visible to the dogs you choose. Every time you check in, you pick: visible to other dogs nearby, or visible only to your pack. You can update your location if you're on the move, delete your check-in anytime, and after 60 minutes you're automatically off the map.

You're in beta

We're still building GoSniff. Things might be glitchy. If something breaks or feels weird, let me know at ren@godogpro.com.

Welcome to the pack!
